# Heimdal™'s Managed XDR Security raises the bar in MDR and XDR, ensuring first-rate threat discovery and mitigation.

**Powered by AI-driven analysis.  
Complemented by human expertise.**

XDR acts as a central hub for security intelligence, gathering and dynamically comparing information across different sources (endpoints, networks, emails, cloud workloads) to detect threats more quickly and boost response times.

Heimdal™'s Managed XDR services intervene to fill the expertise and human resources void.

Building on the stellar performance of our E-PDR suite, we have expanded our award-winning model to managed XDR, combining and connecting telemetry from various channels.

**Environment Security.  
Outsourcing Simplified.**

Building on the stellar performance of our E-PDR suite, we have expanded our award-winning model to managed XDR, combining and connecting telemetry from various channels.

Heimdal™ tracks and addresses emerging threats that could otherwise be overlooked by traditional security solutions. It uses a structured mix of network and endpoint monitoring, behavioral analysis, Machine Learning tools, and threat intelligence.

Thanks to Heimdal™'s eXtended Detection and response, you will trade fragmented tools and data for a consolidated, cohesive approach, all with a seamless user experience.

## Gain deep visibility across your endpoints and network.

To reveal the complete spectrum of threats, we gather details throughout all locations (endpoints, users, network, cloud) and intelligence channels to provide accelerated threat detection, powerful analysis, supreme visibility, and unsurpassed response and remediation.

We employ a rapid and decisive response to attacks and provide you with extended, systemized reports on potential risks, malwares, and vulnerabilities. Get unparalleled security expertise, reliable threat intelligence, and automation to uplift your cybersecurity.

With Extended Detection and Response, you can take a look under the hood of your own threat reports and cybersecurity intelligence with the help of our dedicated team of experts.

Especially if you lack your own incident response team, time is precious and with XDR, you can get straight to the conclusions and visibility that matters.

Eliminate the guesswork and let us walk you through all the vectors and detections in your system, with actionable take-aways.

## XDR: Threat Prevention & Detection

Greatly enhanced by Managed Detection and Response for your endpoints and network.

**Choose Heimdal™'s managed XDR and get:**

- ✓ Threat vectors tracking and analysis
- ✓ Expert knowledge, advanced analytics, and threat intelligence
- ✓ Continuous monitoring 24/7/365
- ✓ Minimize time spent with advanced threat hunting.
- ✓ Get shorter response times and boost your productivity
- ✓ Have complete visibility across your network
- ✓ Quickly detect threats, regardless of where they reside
- ✓ Streamline your security operations
- ✓ Discover existing threats, tools, and procedures used in attacks

**Get peace of mind.  
Let us safeguard your environment.**

Heimdal™'s security professionals go through all sequences of events and continuously inspect users using rights escalations, privileges, and app executions.

We proactively supervise your ingoing and outgoing emails for advanced threats and quickly react to protect you against future attacks.

With our experts keeping constant watch over your systems, we promise top-notch security.

# Empower your cybersecurity defenses.

Combine the best of managed services and the capabilities of a true XDR (Extended Detection and Reponse) suite for a super-charged solution that looks after your defenses.

## Step away from traditional MDR services and reap the benefits of Heimdal™'s managed XDR.

The Heimdal™ XDR managed service leverages the sophisticated capabilities of the Heimdal™ E-PDR for truly advanced detection and response.

Features	MDR + EDR Heimdal™'s eXtended Detection and Response	Standard MDR
Real-time alerting on phone or email in case of an infection or attack	✓	✗
Real-time alerting & advisory on network or endpoint malware infections and potential APT's	✓	✗
24/7/365 Attack monitoring	✓	✗
Policy settings inspection for maximum compliance	✓	✗
Rapid and actionable insight	✓	✗
False-positive handling, pre-incident assessment, and "noise" reduction	✓	✗
Systemized, comprehensive reports on possible threats, malware, and vulnerabilities	✓	✗
Email threats monitoring	✓	✗
Vulnerabilities monitoring	✓	✗
90-days executive summary reports on threats	✓	✗
Actionable advice on how to improve your security levels and policies	✓	✗
Machine isolation and/or network infections removal in case of attack*	✓	✗
